

SQL Project for Marketing Interns

Customer Segmentation & Campaign Performance Database

1. Project Overview

This project designs a marketing analytics database to study customers, campaigns, interactions, conversions, and revenue. It helps marketing teams measure performance and optimize strategies.

2. Database Tables

****Customers****

- customer_id
- name
- age
- gender
- city
- signup_date

****Campaigns****

- campaign_id
- campaign_name
- start_date
- end_date
- budget
- channel

****Campaign_Interactions****

- interaction_id
- customer_id
- campaign_id
- interacted
- interaction_date

****Purchases****

- purchase_id
- customer_id
- purchase_date
- amount
- campaign_id

3. SQL Queries

****Customer Analysis****

1. Total number of customers
2. Customers by city
3. Customers by age group
4. New customers this month

****Campaign Analysis****

5. List all campaigns
6. Campaign count by channel
7. Campaign with highest budget

****Interaction Analysis****

8. Total interactions per campaign
9. Interaction rate
10. Top 5 campaigns by engagement

****Sales & Conversions****

11. Revenue per campaign
12. Conversion rate
13. Highest-grossing campaign
14. Customers who purchased without interaction

****ROI****

15. $ROI = (Revenue - Budget) / Budget * 100$

****Customer Segmentation****

16. High-value customers

17. Frequent buyers

18. Customers with no purchases

****Channel Performance****

19. Revenue by channel

20. Avg interaction rate per channel

4. Insights

- Best-performing channels
- High-value customer segments
- Campaigns with best ROI
- Cities with strongest revenue

5. Conclusion

This project shows marketing analytics skills using SQL, including segmentation, campaign evaluation, and ROI insights.
